

EVALUATION OF BIOCOL (GESAVIT)

In my analysis I focused on the evaluation of Gesavit 50 BG, namely on 2 aspects, the preventative dose (maintenance) and the treatment dose (combative).

Users in total: 44

GIT: Functional problems without an organic cause / constipations, bloating / - **8**
Precancerous cells confirmed by an enterologist / polyps, diverticulosis, ulcerative colitis / - **5**
Postoperative condition of colon including malignancies and adjuvant therapy – **3**

Breast: Functional condition of the mammary gland / mastodynia, mastopathy / - **11**

Cervix + vagina: Inflammations + suspected HPV - **6**

Prostate: Urology referral re. benign prostate hyperplasia - **2**

Postoperative conditions of malignancies + adjuvant therapy - 4

Boost of the immune system after recurrent inflammations - 5

Dosage:

The preparation was prescribed as a preventative dose of Gesavit 50 BG 1 tbl every other day, later 1 tbl daily, approx. 2 packages – 25 patients, or in stressful situations to boost the immune system and along with the primary treatment in a dose of 2x1 up to 3x1 -19 patients.

Results:

- In functional and inflammatory conditions, there was a clear elimination or reduction of the problems that were confirmed during objective assessments / follow-up colposcopy, cytology, breast sonography, PSA reduction
- In severe conditions / malignancies, there was a marked improvement of a subjective feeling of being healthy; awaiting the results of objective assessments.

Prospects:

HP, HSV, endometriosis, immunity-related causes of sterility, inflammations, and skin disorders.

Conclusion:

Gesavit 50 BG is an excellent complementary product for inflammatory conditions, functional GIT problems, precancerous cells of various organs, or as a supplement therapy for malignancies. Its impact has definitely convinced me of its effectiveness.
